

CREATED & ARCHITECTED BY

Fenwick How

Fenwick How

Founder · Architect & Managing Principal

Creator and owner of The Aperture Method™ — the method, the SOPs, and the agents that run them.

Force5

The AI agents of the Aperture Method

Five specialists. One aperture. Each agent owns a phase of the method, carries its own standard of evidence, and hands its findings forward — compressing the mechanical work so the thinking stays human.

HUMAN-LED. AI-ENABLED.

CONFIDENTIAL · SHARED IN CONFIDENCE

THE APERTURE METHOD™ · THE TEAM

Force5

THE AI AGENTS BEHIND THE APERTURE METHOD

Five specialists.
One aperture.

An aperture opens because its blades move together — each doing one thing precisely, onto a single point of focus. **Force5 is what we call the five agents that run the Method.**

Each owns one phase, holds one standard of evidence, and hands the next what it needs. Run in sequence they compress the mechanical eighty percent of an engagement. **What they never do is close the loop themselves** — every phase ends at a human gate.

Five specialists. One aperture.

Force5 is Fenwick How's. He built the method, the SOPs and the agents that run them. It executes as a sequence, not a swarm: each agent owns one phase, produces a defined output, and passes typed evidence to the next — and every phase ends at his gate. The names below are internal working identities; clients experience the Aperture modules.

AT THE HELM

Fenwick How · Founder, Architect & Managing Principal

He designed the method, wrote the SOPs the agents execute, and set the rubric they score against. Intake and acceptance start every engagement; his signature ends it. The agents compress the mechanical eighty percent and surface findings, never conclusions. The agent advises; Fen decides.

FORCES · AGENT 01 OF 5

LENA

THE STRATEGIST

Aperture Insights™

Executive Assessment & Business Diagnostic Agent

Lena sees the whole business before she looks at the pieces.

Lena is the front door to the Aperture Method. She evaluates an organization from the executive level down — its business model, financial condition, operations, customers, people, processes, competitive position and strategic challenges. She listens carefully, challenges assumptions, identifies inconsistencies and determines where deeper investigation is warranted.

MISSION

Her mission is to establish a clear, defensible picture of where the business stands today. She develops the executive diagnostic, identifies strengths, risks and gaps, and establishes the baseline Aperture Score™.

CORE CAPABILITIES

- ◆ Executive-level business diagnostics
- ◆ SWOT, gap and risk analysis
- ◆ Business-model and operational assessment
- ◆ Management interview analysis
- ◆ Aperture Score™ baseline
- ◆ Executive Intelligence Report development

"What is really happening inside this business?"

Experienced, composed, inquisitive and appropriately skeptical. Lena asks the question everyone else overlooked.

TEAM HANDOFF

Lena identifies where to look. Quantitative questions move to Marcus, customer and geographic questions to Natalie, and strategic findings ultimately move to Aria.

AT THE HELM

Fenwick How provides executive judgment, client context and final decision authority. The agent advises; Fen decides.

HUMAN-LED. AI-ENABLED.

CREDENTIALS

The standard this agent is built to.

- ◆ MBA — Strategy & General Management
- ◆ CMC — Certified Management Consultant (IMC)
- ◆ Certified Theory of Constraints practitioner (TOCICO)
- ◆ Balanced Scorecard Professional (BSP)
- ◆ 20+ years advising owner-run businesses, \$1M–\$20M
- ◆ Hypothesis-driven problem solving — MECE, SCQA, issue trees
- ◆ Porter's Five Forces · PESTLE · VRIO · BCG matrix
- ◆ Comparable-business benchmarking across sectors
- ◆ Executive interviewing and evidence triangulation
- ◆ Former COO — full P&L ownership

THE STEPS IT RUNS — AND WHO DOES EACH ONE

Maroon marks a step Fenwick performs himself.

1	Kickoff & data request	FENWICK	7	Synthesis & report	AGENT
2	Assemble & sanity-check	TOOL	8	Readout	FENWICK
3	Seven-lens diagnostic	AGENT	—	Validate the constraint with the owner	FENWICK
4	Interviews	FENWICK	—	Define success measures	HYBRID
5	Score & weight	TOOL	—	Sequence the components	HYBRID
6	Name the binding constraint	HYBRID			

HOW FENWICK CONTROLS THIS AGENT

I set the seven-lens rubric, the sub-criteria, and the Score weights — they are my IP, not the model's. I run every interview personally. I **name the binding constraint**; Lena only proposes ranked candidates with the evidence for and against each. I edit and sign the report, and I deliver every readout.

TOOLS

Everything it may call. Nothing else is available to it.

scoring.score_lens()	Scores one lens against the declared rubric criteria; requires evidence refs
scoring.compute_aperture_score()	Deterministic weighted composite; stamps the weights and rubric version
benchmarks.lookup()	Comparable-business benchmarking where the data allows
constraints.propose()	Theory-of-Constraints analysis; ranked candidates with evidence <i>and</i> disconfirming evidence
interviews.triangulate()	Tests interview claims against the ledger and flags contradictions
measures.baseline()	Pulls a ledger-sourced baseline and target range for each success measure
render.insights_doc()	Builds the branded X-Ray report; refuses to render an uncited figure

MARCUS

THE ANALYST

Aperture Analytics™

Financial Intelligence & Decision Modeling Agent

Marcus turns numbers into decisions.

Marcus is the quantitative engine of the Aperture Method. He transforms financial, operational and commercial data into intelligence executives can use. Revenue is never just revenue: he tests where it came from, what drove it, how profitable it was, whether it is sustainable and what happens when assumptions change.

MISSION

His mission is to separate what management believes from what the evidence demonstrates. He builds the financial and operational models that support decisions involving growth, pricing, investment, cost reduction, capital allocation and performance improvement.

CORE CAPABILITIES

- ◆ Financial modeling and forecasting
- ◆ Profitability and margin analysis
- ◆ Scenario and sensitivity analysis
- ◆ Trend, variance and KPI analysis
- ◆ Opportunity sizing and ROI analysis
- ◆ Data validation and decision models

"What do the numbers actually tell us?"

Analytical, precise, calm and skeptical of unsupported assumptions. Marcus does not argue with intuition — he tests it.

TEAM HANDOFF

Marcus quantifies the opportunities Lena uncovers and gives Aria the financial evidence needed to prioritize them.

AT THE HELM

Fenwick How provides executive judgment, client context and final decision authority. The agent advises; Fen decides.

HUMAN-LED. AI-ENABLED.

02

FORCES AGENT

FORCE5 · AGENT 02 OF 5

MARCUS

THE ANALYST

Aperture Analytics™

MBA

SOP 03 · Aperture Analytics

PHASE
02
QUANTIFY

CREDENTIALS

The standard this agent is built to.

- ◆ MBA — Finance
- ◆ CPA — Certified Public Accountant
- ◆ CMA — Certified Management Accountant
- ◆ CFA Charterholder — investment and valuation analysis
- ◆ FMVA — Financial Modeling & Valuation Analyst
- ◆ Lean Six Sigma Black Belt — process cost and variation
- ◆ Activity-based costing and contribution-margin analysis
- ◆ Unit economics, cohort and lifetime-value modeling
- ◆ Multi-year, driver-based scenario and forecast modeling
- ◆ Audit-grade reconciliation discipline — ties to the dollar

TOOLS

Everything it may call. Nothing else is available to it.

<code>build_financials.py</code>	Assembles revenue and costs into a model that reconciles to the P&L
<code>build_profitmap.py</code>	Cuts profit by product/service, location, and customer segment
<code>allocations.propose()</code>	Proposes a defensible shared-cost allocation basis — and documents it
<code>pareto.rank_drivers()</code>	80/20: the few drivers carrying the profit, and the costs eroding it
<code>breakeven.sensitivity()</code>	Break-even points and sensitivity to price, volume, cost, and mix
<code>scenario.run()</code>	Multi-year, driver-based scenario and forecast modeling
<code>recalc.py</code>	Independently re-computes the workbook to verify every formula
<code>render.analytics_doc()</code>	Builds the branded Profit Map report and the .xlsx scenario model

THE STEPS IT RUNS — AND WHO DOES EACH ONE

Maroon marks a step Fenwick performs himself.

1	Build the financial model	TOOL
2	Map profitability	TOOL
3	80/20 & cost-structure analysis	TOOL
4	Break-even & sensitivity	TOOL
5	Scenario / forecast model	AGENT
6	Synthesis & readout	HYBRID

HOW FENWICK CONTROLS THIS AGENT

I approve the cost-allocation basis before anything is computed on it — allocation choices decide who looks profitable. I set which scenarios get modelled. **Marcus never does arithmetic in prose;** every number comes from a tool I can re-run. I present the readout and I make the recommendation.

FORCE5 · AGENT 03 OF 5

NATALIE

THE EXPLORER

PHASE
03
REVEAL

Aperture Intelligence™

Customer, Market & Geographic Intelligence Agent

Natalie looks beyond the walls of the company.

Natalie is responsible for understanding the world in which the business operates — customers, prospects, competitors, markets, demographics and geography. She combines business intelligence with GIS and spatial analysis so Aperture can answer not only who and what, but also where.

MISSION

Her mission is to reveal where opportunity lives. She identifies the best customers, underserved markets, revenue concentrations, competitive pressure, expansion opportunities and geographic patterns that are difficult to see in a conventional spreadsheet.

CORE CAPABILITIES

- ◆ Customer and market segmentation
- ◆ Competitive and market intelligence
- ◆ TAM / SAM / SOM analysis
- ◆ GIS and demographic analysis
- ◆ Territory and site analysis
- ◆ Market whitespace identification

"Who are our best opportunities — and where are they?"

Curious, investigative, visual and outward-looking. Natalie searches for patterns that are not obvious in rows and columns.

TEAM HANDOFF

Natalie combines external market intelligence with Marcus's quantitative findings and Lena's diagnostic before sending the evidence to Aria.

AT THE HELM

Fenwick How provides executive judgment, client context and final decision authority. The agent advises; Fen decides.

HUMAN-LED. AI-ENABLED.

CREDENTIALIALS

The standard this agent is built to.

- ◆ MS — Geographic Information Science
- ◆ GISP — Certified GIS Professional (GISCI)
- ◆ Esri ArcGIS Pro — Professional certification
- ◆ MBA — Marketing & Customer Analytics
- ◆ Retail site selection and trade-area modeling
- ◆ Spatial statistics — Voronoi, kernel density, isochrones
- ◆ Demographic and psychographic segmentation systems
- ◆ Market-penetration and competitive white-space analysis
- ◆ Customer lifetime value and cohort geography
- ◆ Cartographic design and layer-package delivery

THE STEPS IT RUNS — AND WHO DOES EACH ONE

Maroon marks a step Fenwick performs himself.

1	Assemble & geocode customer data	TOOL
2	Customer analytics	TOOL
3	Trade-area & drive-time analysis	TOOL
4	Market penetration & competition	TOOL
5	Site-selection modeling	AGENT
6	ArcGIS package & readout	HYBRID

HOW FENWICK CONTROLS THIS AGENT

I approve the trade-area parameters and the scoring criteria before any area is ranked. **Natalie never sees a street address** — geocoding runs locally and PII is dropped before analysis. A site recommendation can be a seven-figure decision for a client, so I review, own, and present every one.

TOOLS

Everything it may call. Nothing else is available to it.

<code>geocode.py</code>	Standardizes and validates addresses, geocodes, then drops street-level PII — local only
<code>segments.clv()</code>	Customer segmentation and lifetime value by segment
<code>gis_analysis.py</code>	Trade areas, drive-time rings, demand concentration — local only
<code>gis_layers.py</code>	Voronoi tessellation, buffers, choropleths, H3 aggregation → GeoJSON
<code>demographics.overlay()</code>	Age, sex, income, households and spend by area
<code>syncpoint.query()</code>	Competitor locations, business and household data from the Aperture Platform
<code>site_model.score()</code>	Ranks candidate ZIPs and areas by opportunity score
<code>render.intelligence_doc()</code>	Builds the Market Map report, layer guide, and ArcGIS package

ARIA

THE NAVIGATOR

Aperture Compass™

Strategy, Prioritization & Roadmap Agent

Aria turns intelligence into direction.

By the time information reaches Aria, Aperture understands the company, the numbers, the customers and the market. Aria answers the harder question: what should we do about it? She synthesizes findings into a coherent strategic direction and evaluates competing opportunities against impact, cost, risk, difficulty, resources and timing.

MISSION

Her mission is not to produce a hundred recommendations. It is to identify the few moves that matter most and organize them into an executable, board-ready roadmap.

CORE CAPABILITIES

- ◆ Strategic synthesis and alternatives
- ◆ Initiative prioritization
- ◆ Impact-versus-effort analysis
- ◆ Risk and dependency mapping
- ◆ Implementation sequencing
- ◆ Executive roadmap development

"Given everything we know, what should we do next?"

Decisive, pragmatic and disciplined. Aria is comfortable saying 'not yet' to a good idea when a better opportunity deserves the resources.

TEAM HANDOFF

Aria turns Aperture intelligence into the strategic roadmap. Fen approves the direction; the approved roadmap then moves to Thomas for continuous performance visibility.

AT THE HELM

Fenwick How provides executive judgment, client context and final decision authority. The agent advises; Fen decides.

HUMAN-LED. AI-ENABLED.

04

FORCES AGENT

FORCE5 · AGENT 04 OF 5

ARIA

THE NAVIGATOR

Aperture Compass™

MBA

GIS

SOP 05 · Aperture Compass

PHASE
04
NAVIGATE

CREDENTIALS

The standard this agent is built to.

- ◆ MBA — Strategy
- ◆ PMP and PgMP — Project & Program Management (PMI)
- ◆ PfMP — Portfolio Management Professional (PMI)
- ◆ Prosci-certified change management practitioner
- ◆ Weighted decision matrices · ICE and RICE prioritization
- ◆ Scenario planning and strategic stress testing
- ◆ OKR design and dependency mapping
- ◆ Critical-path sequencing and stage-gate design
- ◆ Portfolio sequencing under capital constraint
- ◆ Board-level one-page executive reporting

TOOLS

Everything it may call. Nothing else is available to it.

opportunities consolidate()	De-duplicates candidate moves from every prior phase into one defined list
matrix.score()	Weighted decision matrix — value, complexity, risk, impact on the constraint
scenario.stress_test()	Tests the top options against the scenario model and plausible futures
sequencer.order()	Orders the winners by dependency and gate; constraint first, expansion last
render.compass_doc()	Builds the branded Opportunity Matrix and the one-page Focus Plan

THE STEPS IT RUNS — AND WHO DOES EACH ONE

Maroon marks a step Fenwick performs himself.

1	Consolidate the opportunity set	AGENT
2	Score in the weighted matrix	TOOL
3	Stress-test against scenarios	TOOL
4	Sequence into Now / Next / Later	HYBRID
5	Build the Focus Plan & readout	HYBRID

HOW FENWICK CONTROLS THIS AGENT

I set the scoring criteria and the weights, and I agree them with the owner before anything is ranked. **I own the sequence** — Aria proposes an order; the order that goes to a board is mine. Every entry in the matrix must cite the upstream finding it came from, or it does not get rendered.

FORCE5 · AGENT 05 OF 5

THOMAS

THE OPERATOR

PHASE
05
PERFORM

Aperture Atlas™

Performance Intelligence & Monitoring Agent

Thomas keeps the strategy alive after the presentation ends.

Thomas is the continuous intelligence layer of the Aperture Method. While the other agents determine where the business stands and where it should go, Thomas watches what happens after decisions are made. He converts strategic initiatives into measurable KPIs, scorecards, dashboards and performance signals.

MISSION

His mission is to keep execution visible. He tracks progress, detects deviations, surfaces emerging trends and identifies when results require management attention — turning Aperture from a consulting engagement into a living management system.

CORE CAPABILITIES

- ◆ KPI architecture and scorecards
- ◆ Executive dashboards
- ◆ Performance and variance monitoring
- ◆ Threshold alerts and trend detection
- ◆ Initiative tracking
- ◆ Continuous improvement analysis

"Are we getting the results we expected?"

Consistent, operational and relentlessly focused on execution. Thomas wants to know whether the strategy is actually working.

TEAM HANDOFF

When Thomas detects a meaningful deviation, he routes the issue back through the Aperture team for diagnosis, analysis or strategic adjustment.

AT THE HELM

Fenwick How provides executive judgment, client context and final decision authority. The agent advises; Fen decides.

HUMAN-LED. AI-ENABLED.

05

FORCE5 AGENT

FORCE5 · AGENT 05 OF 5

THOMAS

THE OPERATOR

Aperture Atlas™

GIS

DATA

SOP 06 · Aperture Atlas

PHASE
05
PERFORM

CREDENTIALS

The standard this agent is built to.

- ◆ MS — Data Analytics
- ◆ CDMP — Certified Data Management Professional (DAMA)
- ◆ CBIP — Certified Business Intelligence Professional
- ◆ BI architecture — Power BI, Tableau, Looker, ArcGIS Dashboards
- ◆ Data engineering — pipeline design and least-access integration
- ◆ KPI design and red/amber/green threshold modeling
- ◆ Time-series variance and anomaly detection
- ◆ SRE-grade alerting discipline — signal over noise
- ◆ Data governance, lineage and access control
- ◆ Executive reporting cadence and steering-meeting design

THE STEPS IT RUNS — AND WHO DOES EACH ONE

Maroon marks a step Fenwick performs himself.

1	Define the KPIs	HYBRID
2	Wire the data	TOOL
3	Build the Scoreboard	TOOL
4	Set the cadence	FENWICK
5	Re-score & steer	AGENT

HOW FENWICK CONTROLS THIS AGENT

I approve every KPI definition and threshold — what counts as red is a judgment, not a formula. **I read every monthly brief before the client does,** and I decide when a signal becomes a conversation. Thomas escalates; he does not act. The client owns the Scoreboard and can operate it themselves.

TOOLS

Everything it may call. Nothing else is available to it.

<code>kpi.define()</code>	Definition, source, target, cadence, owner and RAG thresholds per KPI
<code>pipelines.wire()</code>	Least-access data pipelines from accounting, POS, CRM and marketing
<code>feed.validate()</code>	Reconciles every dashboard value back to the source system
<code>build_dashboard.py</code>	Assembles the Scoreboard — KPIs against targets, trends, Market Map and forecast
<code>anomaly.detect()</code>	Variance and anomaly detection against baseline and plan
<code>scoring.compute_aperture_score()</code>	Re-scores on the stored weights and rubric version
<code>render.signal_brief()</code>	Writes the one-page monthly Signal Brief

Force5

Human-led. **AI-enabled.**

The agents do not replace the consultant. They compress the mechanical work — the reading, the reconciling, the modeling, the mapping, the monitoring — so that judgment, context and accountability stay with a person the client can look in the eye.

Force5 and the agent identities are internal to the practice; clients engage the Aperture modules, not the names. Stated capabilities describe the standard each agent is built to. Shared in confidence — not for redistribution.
