THE APERTURE METHOD™ · THE FULL ENGAGEMENT

What this engagement delivers

Section 01 of 08

FROM THE FOUNDER

What this engagement delivers

Dr. Marchetti,

Enclosed is the complete Aperture Method engagement for Lumina Medical Aesthetics. It follows a single, deliberate arc — Understand, Quantify, Reveal, Navigate, Perform — and each part builds on the one before it, so the whole reads as one continuous story rather than five separate reports.

The short version: Lumina is a strong business that has been growing without getting more profitable. Revenue rose 61% over three years while profit stayed essentially flat, because roughly half of new patients never return. Fixing that — before opening a fourth location — is worth an estimated \$200K–\$400K in additional annual profit, and it is the thread that runs through every deliverable here. When the time comes to expand, your own patients point clearly to the Energy Corridor.

Every number in these documents is drawn from Lumina's own data and reconciles to it. The analysis behind them is the same graduate-level business science used by big-company strategy teams — applied, in plain language, to your business. That combination is the point of The Aperture Method.

It has been a privilege to look at Lumina this closely. I look forward to walking you through it.

Warm regards,

A handwritten signature in black ink, reading "Fenwick How". The signature is fluid and cursive, with a long horizontal line extending from the end of the name.

Fenwick How

CONTENTS

What's inside

The engagement is organized in five phases, each a named product with a distinct question it answers.

Phase	Deliverable	The question it answers
1 · Insights™	Business X-Ray™ + Aperture Score™	What is happening?
2 · Analytics™	Profit Map™ + scenario model	Why is it happening?
3 · Intelligence™	Customer & Market Map™ + GIS package	What opportunities does it reveal?
4 · Compass™	Opportunity Matrix™ + Focus Plan™	Where should we go next?
5 · Live™	Scoreboard™ + KPI system	How do we sustain and improve results?

Companion data (delivered alongside the reports)

- **Financial statements** — 3-year P&L, balance sheet, and cash flow (Excel).
- **Profit Map workbook** — the live, editable scenario model (Excel).
- **Aperture GIS package** — six ArcGIS-ready map layers plus the layer guide.
- **Scoreboard data feed** — 36 months of KPIs to drive your live dashboard.

Read the reports in order for the full story, or jump to any phase — each opens with an executive summary and closes by handing off to the next.

DEPTH OF ANALYSIS

What the financial analysis covers

The Profit Map in this volume is a full financial statement analysis, not a summary of one. It is included in this cover so a reader can see the scope before opening it.

Part	What it contains
I · The face of the statements	The three statements, common-size and horizontal restatement, DuPont return decomposition, and six ratio families on one consistent basis across every period.
II · Behind the numbers	The cash conversion cycle priced as cash released or consumed, deferred revenue, receivables quality, inventory basis and the age of the asset base.
III · Earnings quality	Cash against accrual, and a normalization ledger with an evidence grade on every add-back.
IV · Judgement	Credit and solvency with leases capitalized, a distress score, a constructed value range, break-even and margin of safety, every lever sized and ranked, a price-against-volume grid, and the business decision itself.
Appendix	The conventions the model follows and the derivation of every figure.

THE APERTURE METHOD™ · ENGAGEMENT KICKOFF

Company Profile

The business at a glance — our starting point

Section 02 of 08

ENGAGEMENT KICKOFF

Lumina Medical Aesthetics — the business at a glance

This profile is where the engagement begins: a shared, factual picture of the business as it stands today, the pressures on the table, and the question we will test first. Everything that follows — the diagnostic, the numbers, the maps, the plan — builds on this starting point.

Snapshot	
Business	Lumina Medical Aesthetics — physician-led medical spa
Owner	Dr. Elena Marchetti, MD — medical director & majority owner
Founded	2015 (River Oaks flagship); Katy 2022; The Woodlands opened Oct 2024
Market	Houston, TX metro
Locations	River Oaks (flagship) · Katy (ramping) · The Woodlands (newest) · online store
Team	~40 — 2 MDs, 3 NP/PA injectors, 5 laser/RN techs, 8 aestheticians, admin & GM
FY2025 revenue	\$6.44M
FY2025 EBITDA	~\$0.97M (15%)
Core services	Injectables · laser & skin · body contouring · memberships & facials · skincare

The business

Lumina is a premium, physician-led medical aesthetics practice in some of Houston's most affluent neighborhoods. Over three years it has grown quickly — from \$3.99M to \$6.44M in revenue — on the strength of a strong brand, an excellent injectables practice, and a founder who is still the top-producing injector. It has added locations on instinct and built a real membership base. It is, by most measures, a success story.

Why we're here — what's on the table

Four pressures are converging, and they are really four views of the same business:

- **Growing, but not more profitable.** Revenue rose 61% over three years while EBITDA barely moved (\$878K → \$966K) and margins slipped from 22% to 15%.
- **Scaling on instinct.** Two locations added in three years, both still ramping, and a fourth already under consideration — so far decided by gut, not data.
- **Profitable on paper, tight in the bank.** Despite healthy EBITDA, year-end cash was only \$185K with a heavily drawn line of credit.
- **An eye on the future.** The founder is 53, is the key person in the business, and wants to build toward a sellable, professionalized platform.

Our starting hypothesis

The question we test first

New-patient retention is likely the binding constraint. The pattern suggests Lumina is very good at winning patients and not yet good at keeping them — which would explain the flat profit, the margin slip, and the cash strain at once. The first phase, Aperture Insights™, will confirm or revise this with the data.

What we'll examine

The engagement looks at the whole business through seven lenses, and grounds every finding in Lumina's own data.

- Finance (20%) · Operations (18%) · Customers & Retention (18%) · Market & Competition (14%) · Leadership & Team (12%) · Processes (10%) · Technology & Data (8%).

The weights are fixed by the Aperture Score rubric, published in advance, and identical for every engagement — which is what makes the score comparable between clients and re-scorable over time.

Evidence base: three years of financial statements, appointment-level transactions, a patient list with home locations, and marketing spend by channel — all reconciled to one another so every number ties back to source.

Revenue & economics today

By service line (FY2025)

Service line	Revenue	% of revenue
Injectables (tox + filler)	\$2.79M	43%
Laser & skin	\$1.19M	19%
Memberships & facials	\$0.90M	14%
Body contouring	\$0.76M	12%
Skincare — retail + online	\$0.79M	12%
Total	\$6.44M	100%

By location & three-year trend

	FY2023	FY2024	FY2025
Revenue	\$3.99M	\$5.24M	\$6.44M
EBITDA	\$878K	\$943K	\$966K
EBITDA margin	22%	18%	15%
River Oaks · Katy · Woodlands	—	—	\$4.04M · \$1.64M · \$0.59M

Revenue grew 61% while EBITDA grew ~10% — the pattern this engagement exists to reverse.

The engagement roadmap

THE SHAPE OF THE BUSINESS

Common-size income statement

Every line as a share of revenue. Size tells you how big a business is; this tells you what it is, and it is the fastest way to see a cost base moving before the profit line reports it.

% of revenue	FY2023	FY2024	FY2025
Injectables	42.5%	44.2%	43.3%
Laser & Skin	20.3%	18.9%	18.5%
Body Contouring	11.3%	10.9%	11.8%
Memberships & Facials	13.8%	13.9%	14.0%
Skincare Retail	12.1%	12.1%	12.3%
Cost of goods	27.9%	27.6%	26.7%
Gross profit	72.1%	72.4%	73.3%
Provider compensation	22.6%	24.2%	25.2%
Salaries & administration	8.3%	8.6%	8.7%
Marketing & advertising	8.1%	9.7%	9.7%
Occupancy & rent	5.0%	6.0%	6.7%
Equipment rental & leases	2.4%	2.6%	2.7%
Supplies, software, insurance & other	3.8%	3.3%	5.3%
Total operating expenses	50.1%	54.4%	58.3%
EBITDA	22.0%	18.0%	15.0%
Depreciation & amortization	3.0%	3.4%	3.7%
Operating income	19.0%	14.6%	11.3%
Interest expense	1.4%	2.1%	2.3%
Net income	17.1%	12.0%	8.5%

APERTURE INSIGHTS™ · UNDERSTAND

Business X-Ray™

A whole-business diagnostic & Aperture Score™

The question this answers: ***What is happening?***

Section 03 of 08

EXECUTIVE SUMMARY

The business is growing — but it isn't getting healthier

Lumina has done the hard part: in three years revenue climbed 61%, the brand is strong, and the injectables engine is excellent. Yet almost none of that growth is reaching the bottom line. Profit is essentially flat, cash is tight, and the reason is quietly consistent across every location — the business is very good at winning new patients and not yet good at keeping them.

\$6.44M

FY2025 revenue

+61%

3-year revenue growth

15%

EBITDA margin (was 22%)

56/100

Aperture Score™

Revenue grew from \$3.99M to \$6.44M, but EBITDA moved only from \$878K to \$966K — up 10% while revenue rose 61%. Margins compressed from 22% to 15%. The growth is real; it is simply leaking out faster than it comes in.

The leak has a single dominant source. Of the roughly 1,350 new patients Lumina acquired in the past year, **only about half returned for a second visit**. Because a retained patient is worth roughly four times a one-and-done (\$2,818 vs. \$663 in lifetime value), that retention gap is the most expensive problem in the business — far more valuable to close than chasing more new leads.

The one thing to fix first

New-patient retention is the binding constraint. Lumina is buying growth it cannot keep. Fixing this is worth an estimated \$200K–\$400K in additional annual profit within 24 months — more than a fourth location would add in its first year, at a fraction of the risk.

HOW WE LOOKED

The seven lenses of the Business X-Ray™

The Business X-Ray is a whole-business diagnostic. Rather than looking only at the financial statements, it examines seven interconnected lenses — because the reason profit is flat usually lives in the relationships between them, not in any one number.

- **Finance (20%)** — revenue quality, margin structure, unit economics, and cash conversion.
- **Operations (18%)** — capacity, provider productivity, scheduling, and how consistently the experience is delivered across locations.
- **Customers & Retention (18%)** — acquisition and what each channel costs, repeat behavior, lifetime value, membership, and segment concentration.
- **Market & Competition (14%)** — brand strength, demographics of the trade area, and where Lumina sits versus alternatives.
- **Leadership & Team (12%)** — decision-making, key-person dependence, and the systems that let the business run without the founder.
- **Processes (10%)** — the repeatable workflows (rebooking, follow-up, treatment planning) that turn a first visit into a relationship.
- **Technology & Data (8%)** — what the business measures, how decisions are informed, and whether the tools produce insight or just records.

Evidence base: 3 years of financial statements, 45,800 appointment records, 9,000 patient profiles with home locations, and marketing spend by channel — all reconciled to one another.

The Aperture Score™

Each lens is scored 0–100 and combined into a single Aperture Score using fixed weights — the same weights for every client, so one X-Ray is comparable to another and a re-score proves movement rather than asserting it. It is a baseline, not a grade. Lumina scores **56 of 100 — “Developing”**: a fundamentally strong business with three clear soft spots dragging the whole score down — retention, key-person concentration, and the data to see either coming.

Lens	Weight	Score	Band	What the score reflects
Finance	20%	62	Developing	Strong top line, but compressing margin and tight cash.
Operations	18%	66	Developing	Excellent clinical delivery; capacity underused at newer sites — but billable volume is capped by licensed injector supply, and hiring is reactive.
Customers & Retention	18%	43	Weak	~50% of new patients never return; marketing buys volume, not loyalty.
Market & Competition	14%	72	Strong	Premium brand in an affluent, growing Houston trade area.

Lens	Weight	Score	Band	What the score reflects
Leadership & Team	12%	48	Weak	Capable, but \$1.05M of injectable revenue depends on one role, with no cover and nothing documented.
Processes	10%	46	Weak	No rebooking or follow-up workflow; the second visit is left to chance.
Technology & Data	8%	45	Weak	Decisions made on instinct; no lifetime-value view and no dashboard.
Overall Aperture Score™	100%	56	Developing	Strong core; retention, key-person risk and data are the anchors to lift.

Weighted composite: $(62 \times 0.20) + (66 \times 0.18) + (43 \times 0.18) + (72 \times 0.14) + (48 \times 0.12) + (46 \times 0.10) + (45 \times 0.08) = 56.1$. Scored against ratified rubric v1.2.0 — the version is stamped so this baseline can be re-scored identically later. Weights are fixed and identical for every engagement.

Key-person risk, priced

Lumina has one founding injector, and the concentration is not a matter of opinion — it is measurable in the appointment record. **\$1.05M of the \$2.77M injectable book is delivered personally by that one role** — 38% of the highest-margin revenue in the business.

If that role is unavailable for 90 days	Amount
Injectable revenue delivered by the role, annual	\$1,050,000
Revenue in a 90-day window	\$262,500
Contribution at the 62% injectables margin	\$162,750
Recoverable by other injectors, at current utilization headroom (~35%)	(\$56,960)
Net 90-day exposure	\$105,790

That figure is the floor, not the ceiling. The panel this role serves is also the highest-retaining cohort in the practice, so an absence converts directly into the churn problem described above. And it cannot be solved reactively: a licensed injector takes roughly five months to recruit, credential under medical direction and ramp — so a ninety-day gap is a gap.

- **No cover, nothing written down.** There is no second clinician with medical-direction sign-off, no documented injection or treatment-planning protocol, and no cross-training plan. Capability transfer has never been tested.
- **Everything reports to one person.** All three location leads plus marketing, finance and the front desk report directly to the founder. There is no management layer, which makes the founder the constraint on every decision as well as on the highest-margin revenue.

A note on how we assess people: we look at roles, dependencies, cover and what is documented — never at individuals. Nothing in this report appraises a named person, and every finding here is one you could read aloud to the person it concerns. HR, employment-law and compensation advice are outside our scope.

WHAT WE FOUND

What's working

- **A premium brand in the right market.** River Oaks, Katy, and The Woodlands sit in some of Houston's most affluent, aesthetics-friendly ZIP codes. The brand commands full price for injectables.
- **A best-in-class injectables engine.** Injectables are 43% of revenue at the highest margins in the business and are the natural anchor for lasting patient relationships.
- **A real membership base to build on.** About 34% of active patients are members — a foundation for recurring revenue and retention that most med-spas never establish.
- **A flagship that proves the model.** River Oaks runs at a 24% location EBITDA margin, showing exactly what Katy and The Woodlands can become.

What's costing you

1. A leaking bucket: new patients don't come back

Only about half of new patients return for a second visit, and the value that does exist is concentrated — the top 20% of patients drive 51% of revenue. Lumina is refilling a bucket with a hole in it.

2. Marketing buys volume, not loyalty

Marketing spend nearly doubled, from \$322K to \$626K. More than half of it — about \$345K — goes to paid social at a \$235 cost per new patient, and those patients are the least likely to return. The spend is optimized for first visits, not for relationships.

3. Margin is compressing as the business scales

EBITDA margin fell from 22% to 15% as the mix shifted toward discounted, price-shopped services and as two ramping locations spread fixed costs over too little volume. The Woodlands (open nine months) runs at a planned loss of about \$199K; Katy is thin at a 13% margin versus the flagship's 24%.

4. Profit isn't turning into cash

Despite \$966K of EBITDA, year-end cash was only \$185K. Equipment financing, the Woodlands build-out, working capital, and owner distributions consumed it — leaving the line of credit heavily drawn. Lumina looks healthy on the P&L and feels tight in the bank account.

5. The business runs on instinct, not instruments

Location decisions, marketing allocation, and pricing are made by feel. There is no rebooking system, no lifetime-value view, and no dashboard — so problems like the retention leak stay invisible until they show up in the margin.

THE BINDING CONSTRAINT

If you fix one thing, fix new-patient retention

Every business has one constraint that limits everything downstream. For Lumina it is retention — and it is binding because it sits at the intersection of all three soft spots above: it is a customer problem, amplified by where the deal-seeking patients come from, and it shows up as margin and cash strain.

Retention signal	Reading	Why it matters
New-patient 2nd-visit conversion	~50%	Half of acquired patients never return — the core leak.
One-and-done rate — River Oaks	14%	The mature flagship keeps patients best.
One-and-done rate — Katy	17%	Ramping location, weaker rebooking discipline.
One-and-done rate — The Woodlands	19%	Newest location, no retention system yet.
Value of a loyal vs. one-and-done patient	\$2,818 vs \$663	A retained patient is worth ~4× a one-time visit.
Revenue from the top 20% of patients	51%	The business already lives on its loyal minority.

Retention worsens exactly where Lumina is investing to grow — the newer locations — so scaling without fixing it multiplies the leak.

What it's worth — the prize

Because margins are high, the upside math is dramatic. Retention improvements drop almost entirely to the bottom line.

- Lumina acquires ~1,350 new patients a year; today ~675 return for a second visit.
- A disciplined rebooking-at-checkout and first-visit membership offer typically lifts second-visit conversion from ~50% to ~65% — about **+205 retained patients every year**.
- Each newly-retained patient adds roughly \$1,350 in lifetime value (the gap between a one-and-done and an occasional/loyal patient).
- $205 \times \$1,350 \approx$ **\$277K in additional lifetime revenue per annual cohort** $\approx$ **~\$200K in gross profit** — recurring and compounding as cohorts stack.

The prize, in one line

Closing the retention gap is worth an estimated \$200K–\$400K in additional annual profit within 24 months — larger than a fourth location would contribute in year one (The Woodlands lost ~\$199K in its first nine months), and it de-risks every expansion that follows.

Risks & watch items

- **Key-person dependence.** The founder is still the top-producing injector; capacity and enterprise value are tied to one person.
- **Cash and leverage.** A heavily drawn line of credit leaves little cushion for a slow quarter or a new equipment purchase.
- **Expansion before fundamentals.** Opening a fourth location before fixing retention would scale the leak, not the profit.

RECOMMENDATION

Where this goes next

Lumina does not need more leads — it needs to keep the patients it already wins and to make smarter decisions with data it already generates. The diagnostic gives us the *what*. The next phase gives us the *why*, in numbers precise enough to act on.

We recommend proceeding to **Aperture Analytics™** — to quantify the profit drivers, model the retention fix against a fourth-location scenario, and build the Profit Map™ that shows exactly where every dollar is made and lost.

Next: Aperture Analytics™ — Quantify the Business

The question it answers: “Why is it happening?”

Delivers the Profit Map™ and a scenario model: profitability by service, location, and patient segment; the retention-fix vs. new-location comparison; and the break-even and forecast that turn this diagnosis into a plan.

APPENDIX

Scope, method & data

The Business X-Ray combines a structured executive assessment across the seven lenses with quantitative analysis of Lumina's own records: three years of financial statements, 45,800 appointment-level transactions, 9,000 patient profiles (with home location, acquisition channel, and lifetime value), and marketing spend by channel. All datasets are reconciled to one another, so the figures in this report tie directly to the underlying data.

The Aperture Score weights the seven lenses toward the dimensions that most drive enterprise value for an owner-operated business: Finance 20%, Operations 18%, Customers & Retention 18%, Market & Competition 14%, Leadership & Team 12%, Processes 10%, Technology & Data 8%. The weights are fixed by the ratified rubric, published in advance, and identical for every engagement — which is what makes the score comparable across clients and re-scorable over time. Where evidence will not support a lens it is marked insufficient rather than estimated. This baseline was scored against rubric v1.2.0; every re-score stamps the version it used, so a later comparison is like for like.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All figures are synthetic and internally consistent. Nothing in this document represents a real client, real patients, or real results. Illustrative estimates of financial upside are modeled scenarios, not guarantees of outcome.

THE EVIDENCE UNDER THE LENSES

What the statements say

The seven lenses above are a judgement. This page is the arithmetic they rest on, so the judgement can be checked. Every figure is derived in full in the Profit Map that follows this report.

Measure	FY2023	FY2024	FY2025
Revenue	\$3,990,426	\$5,241,345	\$6,436,888
Gross margin	72.1%	72.4%	73.3%
EBITDA margin	22.0%	18.0%	15.0%
Net margin	17.1%	12.0%	8.5%
Return on assets (avg)	—	34.8%	23.6%
Asset turnover (avg)	—	2.91×	2.77×
Current ratio	1.03×	0.70×	0.66×
Cash conversion cycle	—	22d	21d
Times interest earned	13.78×	6.94×	4.84×

The diagnosis, in the numbers

Gross margin is intact and rising. EBITDA margin fell from 22.0% to 15.0%. Between those two lines sits the entire problem, which places it in the cost base and the patient relationship rather than in pricing. Return on assets of 23.6% on turnover of 2.77× confirms the assets are working; what they produce is thinning on the way down.

Cover is thinner than the growth suggests: revenue can fall 15.4% before operating income turns negative, and the current ratio of 0.66× means current liabilities exceed current assets.

APERTURE ANALYTICS™ · QUANTIFY

Profit Map™

A full financial analysis, and where every dollar is made and lost

The question this answers: **Why is it happening?**

Section 04 of 08

EXECUTIVE SUMMARY

Growth is real. It is being consumed before it reaches the bottom line.

Revenue grew 61% across three years while EBITDA moved 10%. The gap is the whole story, and the statements say where it went: the cost base grew faster than the gross profit that funds it, and what survived was absorbed by capital spending, working capital and distributions before it reached cash.

\$6,437K

Revenue, FY2025

15%

EBITDA margin (was 22%)

23.6%

Return on assets

21d

Cash conversion cycle

Return on assets of 23.6% decomposes into a net margin of 8.5% on asset turnover of 2.77×. **The constraint is margin, not productivity.** The asset base is working hard. What it produces is thinning on the way down the income statement, which means the remedy is price, mix and cost, and not another location.

The binding constraint, ranked by arithmetic

- 1. Margin, not turnover.** Profit margin fell from 12.0% to 8.5% while asset turnover held near 2.77×. A margin move is addressed through price, mix and cost.
- 2. Retention, inside that margin.** Roughly half of new patients never return. Acquisition is being bought at full price and consumed once.
- 3. Cash, not profit, is the near-term limit.** Operating cash flow is 1.45× net income, which is healthy, but capital spending and distributions took all of it.
- 4. There is cover, but less than it looks.** Revenue can fall 15% before operating income turns negative.

PART I

The face of the statements

What the accounts say, read on their own terms: the statements themselves, restated as a share of revenue and as a trend, return decomposed into its parts, and the ratio families calculated on one consistent basis across every period. Everything in this part is derived from figures on the face of the accounts.

THE STATEMENTS

Three years, side by side

\$	FY2023	FY2024	FY2025
Revenue	\$3,990,426	\$5,241,345	\$6,436,888
Cost of goods	(\$1,115,130)	(\$1,447,166)	(\$1,717,797)
Gross profit	\$2,875,296	\$3,794,179	\$4,719,091
Total operating expenses	(\$1,997,296)	(\$2,851,179)	(\$3,753,091)
EBITDA	\$878,000	\$943,000	\$966,000
Depreciation & amortization	(\$120,000)	(\$180,000)	(\$240,000)
Operating income	\$758,000	\$763,000	\$726,000
Interest expense	(\$55,000)	(\$110,000)	(\$150,000)
Franchise tax	(\$22,000)	(\$25,000)	(\$29,000)
Net income	\$681,000	\$628,000	\$547,000
Total assets	\$1,520,000	\$2,088,000	\$2,555,000
Total debt (reported)	\$715,000	\$1,160,000	\$1,390,000
Total equity	\$545,000	\$583,000	\$740,000
Operating cash flow	—	\$805,000	\$795,000
Free cash flow	—	\$85,000	\$195,000

Equity is the owner's capital account and is derived as assets less liabilities. The cash flow statement reconciles the year-over-year change: net income less distributions.

VERTICAL ANALYSIS

Common-size income statement

Every line as a share of revenue. Common-size shows what the business *is*; the trend table that follows shows what it is *doing*. Read either alone and you will reach a confident wrong answer.

% of revenue	FY2023	FY2024	FY2025
Injectables	42.5%	44.2%	43.3%
Laser & Skin	20.3%	18.9%	18.5%
Body Contouring	11.3%	10.9%	11.8%
Memberships & Facials	13.8%	13.9%	14.0%
Skincare Retail	12.1%	12.1%	12.3%
Cost of goods	27.9%	27.6%	26.7%
Gross profit	72.1%	72.4%	73.3%
Provider compensation	22.6%	24.2%	25.2%
Salaries & administration	8.3%	8.6%	8.7%
Marketing & advertising	8.1%	9.7%	9.7%
Occupancy & rent	5.0%	6.0%	6.7%
Equipment rental & leases	2.4%	2.6%	2.7%
Supplies, software, insurance & other	3.8%	3.3%	5.3%
Total operating expenses	50.1%	54.4%	58.3%
EBITDA	22.0%	18.0%	15.0%
Depreciation & amortization	3.0%	3.4%	3.7%
Operating income	19.0%	14.6%	11.3%
Interest expense	1.4%	2.1%	2.3%
Net income	17.1%	12.0%	8.5%

What the common-size table says

Gross margin is stable and strong. The erosion is entirely below it: provider compensation, occupancy and administration each take a larger share of revenue than they did two years ago. That is a cost-structure problem, not a pricing problem, and it is the reason EBITDA margin fell while gross margin did not.

HORIZONTAL ANALYSIS

Indexed to FY2023

Indexed, FY2023 = 1.00	FY2023	FY2024	FY2025
Revenue	1.00×	1.31×	1.61×
Cost of goods	1.00×	1.30×	1.54×
Gross profit	1.00×	1.32×	1.64×
Total operating expenses	1.00×	1.43×	1.88×
EBITDA	1.00×	1.07×	1.10×
Operating income	1.00×	1.01×	0.96×
Net income	1.00×	0.92×	0.80×
Total assets	1.00×	1.37×	1.68×
Total debt	1.00×	1.62×	1.94×
Total equity	1.00×	1.07×	1.36×

Revenue at 1.61× against operating expenses at 1.88× is the arithmetic of the whole problem. Costs are compounding faster than the revenue that carries them.

RETURN DECOMPOSITION

DuPont: margin against productivity

Return on assets separates into two questions with different answers and opposite remedies: how much the business earns on each dollar of revenue, and how much revenue it generates from each dollar of assets. A margin problem and a productivity problem look identical in the return line.

DuPont	FY2023	FY2024	FY2025
Net income	\$681,000	\$628,000	\$547,000
Revenue	\$3,990,426	\$5,241,345	\$6,436,888
Average total assets	—	\$1,804,000	\$2,321,500
Average total equity	—	\$564,000	\$661,500
Profit margin (PM)	17.07%	11.98%	8.50%
Asset turnover (AT)	—	2.91×	2.77×
Return on assets = PM × AT	—	34.81%	23.56%
Financial leverage (assets ÷ equity)	—	3.20×	3.51×
Return on equity = PM × AT × leverage	—	111.35%	82.69%

Read the return on equity carefully

Return on equity of 82.7% is not evidence of an exceptional business. It is 23.6% of asset return multiplied by 3.51× of leverage, on an equity base kept deliberately thin by distributions. The same arithmetic that flatters the return in a good year magnifies the loss in a bad one.

RATIO ANALYSIS

Six families, one basis, every period

Profitability

Ratio	FY2023	FY2024	FY2025
Gross margin	72.1%	72.4%	73.3%
EBITDA margin	22.0%	18.0%	15.0%
Operating margin	19.0%	14.6%	11.3%
Net margin	17.1%	12.0%	8.5%

Returns

Ratio	FY2023	FY2024	FY2025
Return on assets (avg)	—	34.8%	23.6%
Return on equity (avg)	—	111.3%	82.7%
Return on invested capital	58.3%	42.1%	32.4%

Liquidity

Ratio	FY2023	FY2024	FY2025
Current ratio	1.03×	0.70×	0.66×
Quick ratio	0.53×	0.29×	0.28×
Cash ratio	0.42×	0.19×	0.18×
Working capital	\$15,000	(\$237,000)	(\$345,000)

Efficiency

Ratio	FY2023	FY2024	FY2025
Asset turnover (avg)	—	2.91×	2.77×
Days sales outstanding	—	5d	5d
Days inventory outstanding	—	61d	62d
Days payable outstanding	—	44d	46d
Cash conversion cycle	—	22d	21d

Coverage

Ratio	FY2023	FY2024	FY2025
Times interest earned	13.78×	6.94×	4.84×
EBITDA / interest	15.96×	8.57×	6.44×
Total debt / EBITDA	0.81×	1.23×	1.44×
Debt to equity	1.31×	1.99×	1.88×

Cash flow

Ratio	FY2023	FY2024	FY2025
Operating cash flow	—	\$805,000	\$795,000
Free cash flow	—	\$85,000	\$195,000
Cash conversion (CFO / net income)	—	1.28×	1.45×
Capex / revenue	—	13.7%	9.3%
Capex / depreciation	—	4.00×	2.50×

PART II

Behind the numbers

The face of the accounts is where the analysis starts, not where it stops. This part reads what the disclosures add: how the working-capital cycle behaves and what its movement cost in real money, what the deferred revenue balance means for revenue already collected, and how old the asset base is.

THE CYCLE

The cash conversion cycle, priced

Days to collect, plus days of inventory, less days to pay. Stating it in days is the easy half. The half that matters is converting each movement at this business's own daily rate of trade, so the cycle appears as cash rather than as arithmetic.

Working capital	FY2023	FY2024	FY2025
Days sales outstanding (DSO)	—	5d	5d
Days inventory outstanding (DIO)	—	61d	62d
Days payable outstanding (DPO)	—	44d	46d
Cash conversion cycle	—	22d	21d

What the movement was worth in cash

Component	Movement	Cash effect
Collection period	0.1 days	consumes \$1,761
Holding period	1.6 days	consumes \$7,618
Payment period	2.2 days	releases \$10,241
Net effect on cash	-0.5 days	releases \$862

Converted at \$17,635 of revenue a day and \$4,706 of cost of sales a day. A longer collection or holding period consumes cash; a longer payment period releases it.

The cycle is not the problem here, and that is the finding

At 21d the cycle is tight and barely moved, costing \$862 across the year. Patients pay at the point of service, so there is almost nothing to collect. That matters because it rules out the easy answer: the cash pressure is not working capital, it is capital expenditure and distributions. Note also that stretching payables is NOT a lever in this segment. Injectable suppliers allocate product and price on payment behavior, and the allocation is worth more than the cash.

THE NOTES

What the disclosures add

Deferred revenue: cash you have, revenue you have not earned

Memberships and prepaid packages stand at \$190,000, up from \$110,000. That is 3.0% of a year's revenue collected before the service is delivered. It funds the business at zero interest, and it is also an obligation to perform. Operating cash flow is flattered by the \$40,000 increase in the year, which is cash in hand against treatments still owed.

Receivables quality

Receivables of \$95,000 represent 5d of sales, essentially patient financing rather than trade credit. At this size the allowance is immaterial, and the risk in this line is concentration in a small number of financed treatment plans rather than general credit risk.

Inventory basis and holding

Inventory of \$315,000 at 62d of cost of sales. For injectables this is the line to watch: product is dated, allocation is supplier-controlled, and the holding period is a clinical decision as much as a financial one. Two months of cover is defensible. Three would not be.

The age of the asset base

Net property and equipment of \$1,900,000 against annual depreciation of \$240,000 and capital expenditure of \$600,000. Capex is running at 2.50× depreciation, which is a business still building rather than maintaining. That is a choice, and it is where the cash went.

PART III

Earnings quality

Whether the reported profit is supported by cash, and what the reported profit would be if the owner were paid a market wage and the building were rented at a market rent. In an owner-managed business, reported earnings reflect a tax decision as much as the cost of running the business.

CASH AGAINST ACCRUAL

Is the profit real?

Operating cash flow is 1.45× net income. Reported profit is supported by cash, which is the first test any set of accounts has to pass, and these pass it. *Deferred revenue rose 40,000 in the year. Cash arrives before the service is delivered, so operating cash flow flatters the period against the revenue actually earned.*

The add-back ledger

Every normalization carries an evidence grade. A is documented and independently checkable. B is reasoned from evidence but involves judgment. Nothing is added back because it would be convenient.

Add-back	Grade	Amount	Basis
Owner compensation above market	A	\$185,000	W-2 and K-1 against the MGMA median for a supervising physician in this market
Related-party rent above market	B	\$42,000	River Oaks lease against three comparable medical-suite leases within one mile
One-off Woodlands opening costs	A	\$96,000	General ledger detail, non-recurring, FY2025 only
Owner vehicle and personal items	B	\$28,000	General ledger detail, reviewed line by line
Legal settlement (non-recurring)	A	\$35,000	Settlement agreement dated March 2025

Reconciliation	Amount
Reported EBITDA, FY2025	\$966,000
Total normalizations	\$386,000
Adjusted EBITDA	\$1,352,000
Normalizations as a share of adjusted EBITDA	28.6%

A warning the method raises on itself

Normalizations are 28.6% of adjusted EBITDA. Anything approaching thirty percent means the adjusted figure is substantially an argument rather than a result, and a lender or a buyer will treat it that way. Each add-back here is defensible alone. Together they are why the valuation below is a range, and why the add-back file matters more than the multiple.

PART IV

Judgement

What the analysis means, and what it is worth. Solvency measured with the leases put back where they belong, a value range rather than a number, how far revenue can fall, what each lever is worth, and then the business decision the whole report exists to answer.

CREDIT AND SOLVENCY

Leverage, with the leases put back

Lumina reports under a private-company framework and does not carry right-of-use assets on the face of its accounts. The lease obligations are real regardless. Capitalized at the stated rate and term, they change the picture materially, and leaving them out is the most common way a business of this shape understates how borrowed it is.

Capital structure, FY2025	Amount
Total debt as reported	\$1,390,000
Operating lease liability, capitalized	\$2,049,263
Total debt including leases	\$3,439,263
Leases as a share of total debt	59.6%
Total equity	\$740,000
Debt to equity, as reported	1.88×
Debt to equity, including leases	4.65×
Total debt ÷ EBITDA, as reported	1.44×
Times interest earned	4.84×
Free cash flow ÷ total debt	14.0%

Three clinic leases plus device finance. Remaining weighted term 4.0 years, incremental borrowing rate 7.0%. Lumina reports under a private-company framework and does not carry right-of-use assets on the face of the accounts.

Distress risk: the Altman Z-prime

Z-prime, the private-company form. The public Z uses a market value of equity, which a private company does not have.

Component	Value	Weight	Contribution
X1 Working capital / total assets	-13.5%	0.717	-0.097
X2 Retained earnings / total assets	29.0%	0.847	0.245
X3 EBIT / total assets	28.4%	3.107	0.883
X4 Book equity / total liabilities	40.8%	0.420	0.171
X5 Revenue / total assets	2.52×	0.998	2.514
Z-prime score			3.72

Component	Value	Weight	Contribution
Zone			Safe
What the score is actually driven by			
The score sits in the safe zone on the strength of asset turnover alone, which contributes 2.51 of the 3.72. Working capital contributes a negative number. Read plainly: this business is safe because it sells a lot through a small asset base, not because its balance sheet is comfortable. Turnover is the thing protecting it, so anything that slows the trade slows the protection at the same time.			

VALUE

A range, not a number

There is no observable price for a private company, so value is constructed rather than read off a market. Adjusted EBITDA multiplied by an evidenced multiple range, less net debt. **The range is the answer. The midpoint is not.**

Constructed value	Low	Base	High
Multiple applied	4.0×	5.0×	6.0×
Adjusted EBITDA	\$1,352,000	\$1,352,000	\$1,352,000
Enterprise value	\$5,408,000	\$6,760,000	\$8,112,000
Less net debt	(\$1,205,000)	(\$1,205,000)	(\$1,205,000)
Indicative equity value	\$4,203,000	\$5,555,000	\$6,907,000

Observed multiples for single-market, physician-led aesthetics practices with three sites and under \$10M of revenue. A range, because no observable price exists. Net debt excludes capitalized leases, which a buyer would normally assume rather than repay.

Two cautions, and they matter more than the arithmetic. The multiple is applied to *adjusted* EBITDA, of which 28.6% is normalization. And the range is \$2,704,000 wide, which is roughly 49% of the base. Narrowing it is a matter of evidence, not of opinion: a cleaner add-back file narrows it faster than a better argument.

COVER

Break-even and the margin of safety

Break-even, FY2025	Amount
Contribution margin	73.3%
Fixed cost base (operating expenses plus depreciation)	\$3,993,091
Break-even revenue	\$5,446,617
Actual revenue	\$6,436,888
Margin of safety	15.4%

Revenue can fall 15.4% before operating income turns negative. For a business with three sites, a largely fixed clinical payroll and a discretionary service, that is thinner cover than it sounds. Treat it as the number that governs how fast the fourth location can be opened.

Cost of goods is treated as fully variable and all operating expense as fixed. Provider compensation has a commission element, so true break-even is modestly lower. The assumption is stated because it moves the answer.

LEVERS

What each lever is worth

Each line answers one question: if this alone moved, what would it be worth? Sized on FY2025, holding everything else constant. The purpose is ranking, not precision, so that effort goes where the arithmetic says it pays rather than where it is most comfortable to look.

Lever	Move	Operating income	One-off cash
Gross margin One point of gross margin drops straight through. Usually the largest lever available, and the hardest to hold.	+100 bps	\$64,369	—
Revenue growth Incremental revenue at the current contribution rate, assuming the fixed base absorbs it.	+1%	\$47,191	—
Total operating expense Applied across the whole fixed base. Deliverable without touching the patient experience.	-1%	\$37,531	—
Provider compensation The largest single operating line. Changing it touches clinical capacity, so it is a last resort, not a first one.	-1%	\$16,200	—
Days inventory (DIO) A one-off cash release, not a profit improvement. The recurring benefit is the financing cost avoided.	-1 day	—	\$4,706
Days sales outstanding (DSO) One-off cash release. Small here, because patients mostly pay at the point of service.	-1 day	—	\$17,635
Days payable (DPO) NOT RECOMMENDED in this segment. Stretching payables to injectable suppliers risks allocation and price, which costs more than the cash it releases.	+1 day	—	\$4,706
The ranking, and the one to refuse A point of gross margin is worth \$64,369. A full point of revenue growth is worth \$47,191. Fix what happens inside the patient base before buying more of it. The payables lever is listed and then declined: \$4,706 a day is not worth the supplier standing.			

SENSITIVITY

Price against volume

Change in gross profit for a given price move and the volume response it provokes, against a base of \$4,719,091. The zero crossing in each row is the volume a price rise can absorb before it destroys value. A pricing case argued on margin alone has not answered the question this grid asks.

Change in gross profit	Volume flat	-2.5%	-5.0%	-7.5%	-10.0%	-15.0%
Price -4.0%	(\$257K)	(\$369K)	(\$481K)	(\$592K)	(\$704K)	(\$927K)
Price -2.0%	(\$129K)	(\$243K)	(\$358K)	(\$473K)	(\$588K)	(\$817K)
Price unchanged	\$0K	(\$118K)	(\$236K)	(\$354K)	(\$472K)	(\$708K)
Price +2.0%	\$129K	\$8K	(\$114K)	(\$235K)	(\$356K)	(\$598K)
Price +4.0%	\$257K	\$133K	\$9K	(\$116K)	(\$240K)	(\$489K)
Price +6.0%	\$386K	\$259K	\$131K	\$3K	(\$124K)	(\$380K)
Price +8.0%	\$515K	\$384K	\$253K	\$122K	(\$8K)	(\$270K)

Assumes cost of sales is fully variable with volume and unaffected by price. Elasticity is not uniform across a range, so read this as a boundary condition for a targeted test, not as a forecast.

WHERE PROFIT IS REALLY MADE

Profit Map™ — by service line

Contribution is revenue minus direct product and consumable cost. It reveals which services actually fund the business, which is not the same as which generate the most revenue. Revenue reconciles to the income statement in Part I.

Service line	Revenue	Contribution	CM %	% of profit
Injectables	\$2.79M	\$1.90M	68%	40%
Laser & Skin	\$1.19M	\$1.07M	90%	23%
Memberships & Facials	\$0.90M	\$0.76M	84%	16%
Body Contouring	\$0.76M	\$0.65M	85%	14%
Skincare Retail	\$0.79M	\$0.35M	44%	7%
Total	\$6.44M	\$4.72M	73%	100%

- **Injectables are the engine.** 43% of revenue and 40% of all profit, and the natural anchor for a lasting patient relationship.
- **Laser and memberships punch above their weight.** The highest contribution margins in the business at 90% and 84%, and worth actively selling into the loyal base.
- **Skincare retail is the margin drag.** A 44% contribution margin. A candidate to reprice, bundle into memberships, or reposition as a retention tool rather than a profit center.

WHERE VALUE CONCENTRATES

Profit Map™ — by patient segment

The single most important table in this report. A small group of loyal patients carries the business, which is exactly why retention rather than acquisition is the profit lever.

Patient segment	Patients	% of patients	Avg lifetime value	% of revenue
VIP Loyalist	1,369	17%	\$4,510	39%
Loyal Repeat	2,937	36%	\$2,030	38%
Occasional	2,460	30%	\$1,040	16%
One-and-Done	1,469	18%	\$663	6%
Total	8,235	100%	\$1,903	100%

The concentration, in one line

VIP and Loyal patients are 52% of the base but roughly 77% of revenue. One-and-Done patients are 18% of the base and 6% of revenue. Every patient moved up one loyalty tier is worth several times a newly acquired one, and the margin arithmetic in Part IV says the same thing from the other direction.

THE DECISION, QUANTIFIED

Scenario model: fix retention, or open a fourth location

Four paths modeled through FY2028 on a single transparent engine. Each year's revenue is the prior year times a growth rate; EBITDA is revenue times a margin. The full editable model ships with this report.

Scenario	3-yr EBITDA	FY28 margin	Cash / capex	Risk
A · Status quo	\$3.44M	16%	~\$0.3M	Low, and slow
B · Fix retention	\$4.61M	20.5%	~\$0.3M	Low
C · Open 4th location	\$3.75M	16.8%	~\$0.65M+	High
D · Both, retention first	\$4.95M	20.8%	~\$0.65M+	Medium

Retention delivers more three-year profit than expansion, for roughly a third of the cash and none of the ramp risk. Both is the destination, but it only works in that order, so the new site inherits a working retention system instead of repeating The Woodlands ramp. The margin of safety of 15.4% is the constraint on how fast that second step can be taken.

What retention is worth, and what a location must clear

Second-visit conversion lift	Added retained patients / yr	Added annual gross profit
+5 points	~68	~\$67K
+10 points	~135	~\$133K
+15 points (base case: 50% → 65%)	~205	~\$200K
+20 points	~270	~\$266K

For comparison a new location must clear roughly **\$0.9M in annual revenue, about \$74K a month, simply to break even**, typically twelve to fifteen months in. The Woodlands is on that path and not there yet. Fixing retention first shortens every future ramp.

RECOMMENDATION

Where this goes next

The analysis points one way. The constraint is margin rather than productivity, the margin leak is retention, and a point of gross margin is worth more than a point of growth. Keep the patients already won, sell the highest-margin services into the loyal base, and prove the retention model before spending cash on a fourth site. To act on that we now need to know *where* the high-value patients are, and where the next location should go.

Next: Aperture Intelligence™ — Reveal Customer & Market Intelligence

The question it answers: “What opportunities does it reveal?”

Maps where Lumina's most valuable patients actually live, turns online-order and patient addresses into trade areas and drive-time, overlays demographics, and builds the data-driven case for the fourth location.

APPENDIX

How to read this analysis

Every figure in this report is produced by a stated formula from a sourced input. This appendix sets out the conventions the model follows, so the analysis can be checked, repeated and understood rather than believed.

Conventions

Convention	Rule
Average balances	Ratios that divide a flow by a stock use the mean of opening and closing balances and are marked avg. The earliest period therefore produces no such ratio.
Day count	All days measures assume a 365-day year.
Sign convention	Revenue and income are entered positive; every expense is entered positive and subtracted by the model. Cash outflows carry the sign the statement shows.
Derived subtotals	Subtotals compute from their components, so a presentation difference never silently becomes an arithmetic error.
Leases	Capitalized as the present value of the remaining payments at the stated incremental borrowing rate, and shown separately from reported debt throughout.
Distress score	The Z-prime form, for private companies. The public Z requires a market value of equity, which does not exist here.
Normalizations	Each carries an evidence grade. A is documented and independently checkable; B is reasoned from evidence but involves judgment.

Derivation

All figures derive from the Lumina financial statements workbook and the FY2025 appointment records. Service-line contribution is summed from appointment level, revenue less direct product and consumable cost. Segment economics use each patient's actual lifetime revenue with the gross margin above applied to estimate contribution. Revenue in every table reconciles to the income statement in Part I.

What is assumed rather than sourced

Three inputs are not on the face of the statements and are stated here so they can be challenged: the lease term and discount rate used to capitalize the lease obligations; the five normalizations and their evidence grades; and the multiple range applied to adjusted EBITDA. Each appears with its basis where it is used.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All figures are synthetic and internally consistent. Projections are modeled scenarios, not guarantees of outcome.

APERTURE INTELLIGENCE™ · REVEAL

Customer & Market Map™

Where your most valuable patients are — and where to grow next

The question this answers: ***What opportunities does it reveal?***

Section 05 of 08

EXECUTIVE SUMMARY

Your patients have already told you where to grow

We mapped every patient and online customer to where they live, then turned those points into trade areas, drive-time, market penetration, and a site-selection model. Two things stand out: Lumina's value is tightly clustered around its flagship, and a specific, affluent gap in the map is full of patients already driving past two clinics to reach it.

8,235

patients mapped to home
location

4.7 mi

average drive to nearest
clinic

90%

of patients within 10 miles

3.7%

penetration of affluent
households

Ninety percent of patients live within ten miles of a clinic — Lumina is a local, drive-time business, exactly the kind of pattern where geographic intelligence pays off. Penetration of the affluent households in its trade areas is only 3.7%, so there is substantial room to grow inside the footprint it already has.

The opportunity on the map

The Energy Corridor is the fourth location the data is pointing at. Roughly 500 patients and ~\$843K in revenue already come from that district, each driving about nine miles to River Oaks or Katy — a proven, affluent pocket of demand sitting in the gap between the two. This is a location decision made with evidence, not instinct.

HOW WE MAPPED IT

From addresses to intelligence

Every patient intake and online order carries an address. Geocoded and layered, those points become a strategic picture no single dashboard shows:

- **Trade areas & drive-time** — how far patients travel to each clinic, and the realistic catchment around each location.
- **Value mapping** — where the high-lifetime-value patients actually live, not just where visits happen.
- **Market penetration** — patients as a share of affluent households by ZIP, to see where the trade area is full and where it is wide open.
- **Site selection** — an opportunity score combining proven demand, distance underserved, and affluence, to rank where the next clinic should go.

Built from 8,235 active patients and 1,812 online customers with home locations, aggregated to 28 Houston-area ZIP codes. The underlying GIS datasets accompany this report (see final section).

Where your patients are — the trade area

Lumina's demand is concentrated and local. Two-thirds of patients live within five miles of a clinic, and the richest ZIPs cluster tightly around the River Oaks flagship and Katy.

ZIP · area	Patients	Revenue	Avg LTV	High-value %	Miles to clinic
77019 · River Oaks	595	\$1.26M	\$2,118	60%	0.7
77027 · Highland Village	508	\$1.13M	\$2,229	58%	2.4
77494 · Katy	508	\$1.13M	\$2,228	58%	2.0
77005 · West University	455	\$0.99M	\$2,197	61%	2.9
77024 · Memorial	457	\$0.97M	\$2,126	60%	6.7
77450 · Katy	422	\$0.88M	\$2,079	54%	1.3

Drive-time distribution: 68% of patients within 5 miles · 90% within 10 miles · 97% within 15 miles.

WHAT THE MAP REVEALS

Value concentrates near the flagship — and the newest clinic is still building its base

Mapping high-value patients (VIP + Loyal) by their nearest clinic connects the spatial picture directly to the retention story from earlier phases.

Nearest clinic	High-value patient share	What it tells us
River Oaks	54%	The mature flagship has the deepest loyal base.
Katy	51%	Ramping well; loyal base approaching the flagship.
The Woodlands	48%	Newest clinic — still converting first-visits into loyalty.

The Woodlands' lower high-value share is not a market problem — the surrounding ZIPs are affluent — it is the retention system not yet being in place. This is the same leak the diagnostic found, now visible on the map: fix retention and the newest locations' maps fill in with loyal, high-value patients.

Room to grow inside the current footprint

Overall penetration of affluent households is just 3.7%. Even the best ZIPs sit near 6–10% — meaning the trade areas Lumina already serves are far from saturated. Deeper penetration of the existing footprint is a lower-risk growth lever than new geography, and it compounds with the retention fix.

WHERE TO GROW NEXT

The site-selection case for location #4

The site model ranks every ZIP on proven demand, how far that demand currently travels, and affluence. One district rises above the rest.

Candidate area	Patients today	Revenue today	Miles traveled	Affluence	Opportunity
77079 · Energy Corridor	275	\$488K	9.3	5	Highest ✓
77441 · Fulshear	234	\$434K	8.7	5	High
77433 · Cypress	255	\$409K	10.4	4	High
77077 · Energy Corridor	232	\$355K	9.0	4	High
77546 · Friendswood	136	\$208K	21.0	4	Frontier
Recommendation — location #4: the Energy Corridor Why here: the 77079/77077 district already sends ~500 patients and ~\$843K in revenue to Lumina, each driving ~9 miles from an affluent gap directly between River Oaks and Katy. The demand is proven, the affluence is top-tier, and a clinic here shortens the drive for hundreds of existing patients while capturing new ones. Sequence: open it after the retention fix (Analytics, Scenario D), so the new clinic inherits a working retention system instead of repeating The Woodlands' slow ramp. Fulshear (west) and Pearland/Friendswood (south) are the identified frontier for a fifth location.					

FOR YOUR GIS

The datasets behind this map

All analysis is delivered as clean, geocoded datasets ready to load into Aperture GIS for live maps, heat maps, and drive-time layers.

- **gis_patient_points.csv** — one row per patient: latitude/longitude, ZIP, nearest clinic and distance, segment, value tier, lifetime value. The point layer for heat maps and clustering.
- **gis_zip_summary.csv** — per-ZIP aggregation: patients, revenue, average lifetime value, high-value share, average drive distance, and penetration of affluent households. The choropleth layer.
- **gis_clinic_locations.csv** — the three existing clinics plus the recommended fourth site, for drive-time and trade-area rings.
- **gis_site_candidates.csv** — the ranked site-selection candidates with opportunity scores.

Where this goes next

We now know what is happening, why, and where. The remaining question is sequencing — which moves, in what order, for the greatest return with the least risk.

Next: Aperture Compass™ — Determine the Strategic Direction

The question it answers: “Where should we go next?”

Scores every opportunity — fix retention, deepen penetration, reprice retail, open the Energy Corridor — on value, complexity, risk, and impact, and sequences them into a Now / Next / Later Focus Plan™.

APPENDIX

Method & data

Patient and online-customer addresses were geocoded and aggregated to ZIP level. Drive distance is measured to the nearest of the three clinics. Market penetration uses an illustrative estimate of affluent households per ZIP. The site-selection opportunity score weights proven demand (revenue) most heavily, then distance underserved, then affluence. All patient figures reconcile to the appointment data.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All patients, addresses, and household estimates are synthetic and illustrative. Nothing here represents real individuals or real market data.

THE ECONOMICS UNDER THE MAP

What a patient is worth, and why that governs where to go next

Trade areas are only worth drawing if the value of the patients inside them is known. The contribution margin used throughout this section is 73.3%, taken from the income statement rather than assumed, so every catchment figure converts to profit on the same basis as the Profit Map.

Measure	Value	Source
Contribution margin	73.3%	Gross profit ÷ revenue, FY2025
Revenue per day of trade	\$17,635	Revenue ÷ 365
Fixed cost base to cover	\$3,993,091	Operating expenses plus depreciation
Break-even revenue, current footprint	\$5,446,617	Fixed costs ÷ contribution margin

A fourth site inherits the same contribution margin but adds its own fixed base, which is why the site-selection question is not where the most people are, but where enough of the right people are to clear a fixed cost quickly.

APERTURE INTELLIGENCE™ · REVEAL

GIS Layer Guide

ArcGIS-ready layers, and the analyses that make them powerful

The question this answers: ***What opportunities does it reveal?***

Section 06 of 08

OVERVIEW

A load-and-go geographic intelligence package

This package turns Lumina's customer data into six ready-to-map layers for ArcGIS Pro or ArcGIS Online. Each is standard GeoJSON in WGS84 (EPSG:4326) — drag them in, apply the suggested symbology, and the maps in the Customer & Market Map come to life. This guide is the key to the layers and the recipe for five analyses that turn points on a map into decisions.

6

ready-to-map layers

8,235

geocoded patient points

28

ZIP trade-area polygons

EPSG:4326

WGS84, ArcGIS-native

To load: in ArcGIS Pro use **Map** → **Add Data** and select the .geojson files; in ArcGIS Online use **Add** → **Add layer from file**. The accompanying CSVs (patient points, ZIP summary, clinics, candidates) support the “Add data from CSV / XY table to point” workflow if you prefer tables.

WHAT'S IN THE PACKAGE

Layer catalog

Layer	Geometry	Features	What it's for
01_patient_points	Point	8,235	Heat maps, clustering, value hot-spots.
02_zip_choropleth	Polygon	28	Revenue, LTV, penetration by trade area.
03_clinics_and_candidate	Point	4	Existing clinics + recommended 4th site.
04_trade_area_rings	Polygon	12	3 / 6 / 10-mile catchment bands per site.
05_competitors_illustrative	Point	18	Competitive density & gap analysis.
06_site_opportunity	Point	28	Scored ZIP opportunities for site selection.

All layers share the ZIP field, so any two can be joined. Competitor locations and median-income estimates are illustrative.

Key fields

01_patient_points

patient_id · zip · nearest_clinic · miles_to_clinic · segment · value_tier (Bronze/Silver/Gold/Platinum) · member · visits · lifetime_value.

02_zip_choropleth

zip · area · active_patients · revenue · avg_ltv · pct_high_value · avg_miles_to_clinic · penetration_pct · affluence_tier · est_median_income · est_households.

06_site_opportunity

zip · area · opportunity_score · revenue_today · patients_today · miles_underserved · affluence · flag (Whitespace/candidate vs. Core/deepen penetration).

MAKE IT POWERFUL

Five analyses to run in ArcGIS

The layers are the raw material. These five analyses are where the geographic intelligence — and the story — comes from.

1. Customer value heat map

Symbolize 01_patient_points with **Heat Map** weighted by lifetime_value, or run **Optimized Hot Spot Analysis** on lifetime_value. Reveals where Lumina's revenue actually lives — tight clusters around River Oaks and Katy.

2. Trade areas & true drive-time

Drop in 04_trade_area_rings for instant 3/6/10-mile catchments. To upgrade to real drive-time, run **Network Analyst** → **Service Area** from 03_clinics_and_candidate at 10/20/30-minute breaks. Confirms the ~90%-within-10-miles pattern and sizes the Energy Corridor gap.

3. Market-penetration choropleth

Symbolize 02_zip_choropleth by penetration_pct (graduated colors). For real demographics, **Join** to the ArcGIS Living Atlas "ACS Median Household Income" ZIP layer on the zip field and recompute penetration against actual affluent-household counts. Shows the 3.7% overall penetration and where the footprint is far from full.

4. Weighted site-selection suitability model

The pre-scored 06_site_opportunity layer graduates every ZIP by opportunity. To build it yourself, run **Weighted Overlay / Suitability Modeler** combining demand (revenue), distance-underserved, and affluence at 55 / 25 / 20 weights. The Energy Corridor rises to the top — a data-defensible location #4.

5. Competitive gap / white-space

Overlay 05_competitors_illustrative on the patient heat map and trade-area rings. Look for affluent, high-demand areas *outside* competitor coverage and outside Lumina's current rings — the white space. The Energy Corridor and the southern belt (Pearland/Friendswood) surface as the clearest gaps.

The payoff

RECOMMENDED SYMBOLOGY

Styling for impact

Layer	Symbolize by	Style
Patient points	value_tier	Graduated dots; Platinum = maroon, larger.
ZIP choropleth	penetration_pct	Sequential ramp, white → maroon.
Trade-area rings	band	Hollow fill, graduated outline by radius.
Clinics & candidate	type	Existing = black pin; candidate = maroon star.
Competitors	type	Small gray triangles.
Site opportunity	opportunity_score	Graduated symbols; flag drives color.

Keep the palette restrained — black, white, and the maroon accent (#500000) — so the map reads as premium and the signal stands out. Let one maroon element (the candidate site, or the hottest opportunity) carry the eye.

GO FURTHER

Layers to add — external data that sharpens every decision

The six layers in this package are built from Lumina's own customers. Overlaying third-party data turns description into prediction: who the best prospects are, where lookalikes live, and which specific corner to open on. Most of the demographic and spending variables below can be attached automatically with **ArcGIS Business Analyst** → **Enrich Layer** on the provided ZIP and point layers (they already carry a zip field to join on). The rest come from ArcGIS Living Atlas, government open data, or commercial providers.

Highest-priority adds for a med-spa

Demographics & population — U.S. Census / ACS (via Living Atlas or Enrich)

Layer	Source	Why it matters for Lumina
Total population & density	Census / ACS	Sizes the addressable market in each trade area.
Median household income	ACS	Core affluence filter — aesthetics demand tracks income.
Female population, age 30–64	ACS (age × sex)	The primary aesthetics customer; target and site-select on it directly.
Household composition (kids vs. no kids)	ACS	Discretionary time and spend differ; shapes offers and messaging.
Educational attainment (bachelor's+)	ACS	Correlates strongly with cosmetic-service adoption.
Age bands (25–34, 35–54, 55+)	ACS	Match services to areas — injectables skew 30–55, laser broader.
Homeownership & home value	ACS	Wealth proxy beyond income; signals trade-area stability.
Population growth / projections	Esri	Favor growth (Katy, Cypress, Fulshear); avoid chasing decline.
Daytime / workday population	Esri	The Energy Corridor's large daytime workforce = lunchtime/after-work demand.

Consumer spending & lifestyle — Esri Business Analyst / Tapestry

Layer	Source	Why it matters for Lumina
Personal-care & cosmetic	Esri Consumer	Direct demand signal for services and retail

Layer	Source	Why it matters for Lumina
spending potential	Spending	skincare.
Health & wellness / medical spending	Esri	Sizes body-contouring, wellness, and membership demand.
Tapestry lifestyle segments	Esri Tapestry	Psychographic lookalikes of your VIP/Loyal patients — find more of them.
Disposable-income index	Esri	Where premium pricing holds vs. where discounts are needed.

Health & demand indices

Layer	Source	Why it matters for Lumina
Health indicators (obesity, activity)	CDC PLACES (Living Atlas)	Demand signal for body contouring and wellness services.
Health-insurance coverage	ACS / CDC	Cash-pay propensity — aesthetics is elective and largely cash.
Cosmetic-procedure propensity index	Esri / MRI-Simmons	Likelihood to use Botox, filler, or laser by area.

Mobility, visibility & access

Layer	Source	Why it matters for Lumina
Traffic counts (AADT)	TxDOT open data	Site visibility, billboard value, and ease of access.
Billboard / OOH inventory	Geopath / OOH vendors	Where to buy out-of-home near affluent, high-traffic corridors.
True drive-time service areas	Esri Network Analyst	Replace the ring buffers with real travel-time catchments.
Commute flows (home vs. work)	Census OnTheMap (LODES)	Site near the paths your customers already travel.
Road network & access / turn lanes	OSM / DOT	Real-world accessibility of a specific candidate parcel.

Competition, co-tenancy & real estate

Layer	Source	Why it matters for Lumina
Competitor med-spas, dermatology & plastic surgery	Esri Business / SafeGraph / Places	Saturation and white-space — upgrade the illustrative competitor layer.
Complementary businesses	Esri Business	Co-location and referral adjacency; foot-traffic

Layer	Source	Why it matters for Lumina
(salons, gyms, luxury retail)		halo.
Shopping centers & retail anchors	Esri / CoStar	Preferred med-spa real estate (grocery-anchored, luxury retail).
Retail vacancy / available lease space	CoStar / LoopNet	The actual sites available in the target area.
Foot-traffic / visit patterns	Placer.ai / SafeGraph	Validate a candidate location's real-world traffic before signing.

Base & boundary layers

Layer	Source	Why it matters for Lumina
ZIP / ZCTA, tracts, block groups	Census TIGER (Living Atlas)	The join level for every demographic layer (join on the zip field).
City / county / place boundaries	Census	Licensing, tax, and marketing geography.

Tip: run Business Analyst “Enrich Layer” once on 02_zip_choropleth and 03_clinics_and_candidate to attach most demographic, income, spending, and health variables in a single step — then re-symbolize and re-run the site-suitability model with real inputs.

Where this goes next

These layers and the Customer & Market Map hand a prioritized set of geographic moves to the next phase.

Next: Aperture Compass™ — Determine the Strategic Direction

The question it answers: “Where should we go next?”

Scores and sequences every opportunity — including the Energy Corridor and deeper penetration of the current footprint — into a Now / Next / Later Focus Plan™.

APPENDIX

Technical notes

Coordinate system: WGS84 / EPSG:4326 (decimal degrees). Trade-area rings are geographic distance buffers approximating drive-time; replace with Network Analyst service areas for true travel time. Median-income and competitor layers are illustrative placeholders — swap in ArcGIS Living Atlas demographics and a real competitor dataset for production analysis.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All patients, addresses, competitor locations, and household/income estimates are synthetic and illustrative. Nothing here represents real individuals or real market data.

READING THE LAYERS AS MONEY

Turning a catchment into a contribution figure

Every layer in this guide exists to answer a financial question, and each one converts on the same basis as the Profit Map. The arithmetic is deliberately simple so it can be repeated without the model open.

From the map	Multiply by	To get
Patients in a drive-time band	Average lifetime revenue	Revenue in the catchment
Revenue in the catchment	73.3% contribution margin	Contribution from the catchment
Contribution from the catchment	Less the site fixed base	Operating income the site would earn
A candidate site's revenue	Against \$5,446,617 break-even	Whether it clears, and how fast

Contribution margin and the break-even figure are carried from the Profit Map, not re-estimated here.

APERTURE COMPASS™ · NAVIGATE

Opportunity Matrix™ & Focus Plan™

The prioritized roadmap — what to do now, next, and later

The question this answers: **Where should we go next?**

Section 07 of 08

EXECUTIVE SUMMARY

From analysis to a sequenced plan

The first three phases told Lumina what is happening, why, and where. This phase turns that into a decision about order. The principle is simple and it is worth more than any single tactic: fix the leak before you pour in more water. Seal retention and sharpen the current footprint first; expand geographically only once the model is proven.

10

opportunities scored

4

quick wins to start now

56 → 72

targeted Aperture Score™

15% →**20%+**

targeted EBITDA margin

Sequenced correctly, the same opportunities that looked like a scattered to-do list become a compounding plan: the retention fix funds and de-risks everything after it, deeper penetration raises the value of every location, and the fourth clinic — the Energy Corridor — opens into a working system instead of a slow, loss-making ramp.

The navigating principle

Now: stop the leak and tune the engine (retention, marketing quality, retail margin, cash). **Next:** deepen the footprint and reduce key-person risk. **Later:** expand to the Energy Corridor and build toward a sellable platform.

HOW WE PRIORITIZED

Four lenses on every opportunity

Each opportunity from the diagnostic, the Profit Map, and the Customer & Market Map was scored on four dimensions. The combination — not any single score — determines sequence.

- **Value** — the size of the profit or enterprise-value impact.
- **Complexity** — how hard it is to execute, in effort, time, and coordination.
- **Risk** — the chance and cost of it going wrong, including cash exposure.
- **Impact** — how much it de-risks or amplifies everything that comes after it.

The pattern that falls out is intuitive: high-value, low-complexity, low-risk moves (the “quick wins”) go first; high-value but capital-heavy moves (the “big bets”) wait until the quick wins have funded and de-risked them.

The Opportunity Matrix™

Opportunity	Value	Complexity	Risk	Type	When
Rebooking + first-visit membership (retention fix)	High	Low	Low	Quick win	Now
Rebalance marketing to referral / CRM	High	Low	Low	Quick win	Now
Reprice & bundle retail skincare	Med	Low	Low	Quick win	Now
Cash & working-capital discipline	Med	Low	Low	Quick win	Now
Deepen penetration of core trade areas	High	Med	Med	Major project	Next
Cross-sell laser & memberships to loyal base	High	Med	Low	Major project	Next
Reduce founder key-person risk	Med	Med	Med	Foundation	Next
Stand up the Scoreboard & data discipline	Med	Med	Low	Enabler	Next
Open the Energy Corridor (location #4)	High	High	High	Big bet	Later
Frontier #5 + exit-readiness / professionalize	High	High	High	Big bet	Later

Quick wins are high-value, low-complexity, low-risk — they go first and fund the rest. Big bets are high-value but capital-heavy — they wait until the model is proven.

THE FOCUS PLAN™

Now — the first 90 days

Stop the leak and tune the engine. These four moves need little capital, carry little risk, and start compounding immediately.

Initiative	What it involves	Expected outcome
Fix retention	Rebooking-at-checkout, a first-visit membership offer, and a 14/30/90-day follow-up sequence.	+\$200K–\$400K annual profit as second-visit conversion climbs 50% → 65%.
Rebalance marketing	Cut discount paid-social; redeploy to referral, CRM/email reactivation, and retention.	~\$120K redeployed to higher-quality, higher-retaining patients.
Reprice & bundle retail	Move skincare into memberships and bundles rather than one-off discounting.	Higher retail contribution margin; another retention hook.
Cash discipline	A line-of-credit paydown plan and membership deferred-revenue management.	Rebuilt cash cushion; less balance-sheet fragility.

Next — months 3 to 9

With the leak sealed, grow the value of what already exists and remove the fragilities that would cap it.

Initiative	What it involves	Expected outcome
Deepen penetration	Target lookalikes of VIP/Loyal patients in current trade areas using the GIS layers.	More high-value patients inside the footprint you already serve (penetration 3.7% → higher).
Cross-sell high-margin services	Structured pathways from injectables into laser, memberships, and skin.	Higher lifetime value per existing patient.
Reduce key-person risk	Build an injector bench; standardize protocols and the patient experience.	Added capacity and materially higher enterprise value.
Stand up the Scoreboard	Launch the Aperture Atlas™ dashboard and weekly operating rhythm.	Decisions made on instruments, not instinct.

Later — months 9 to 24

Only now — with retention fixed, the footprint deepened, and a dashboard in place — does geographic expansion make sense. The new clinic inherits a working system instead of repeating The Woodlands' ramp.

Initiative	What it involves	Expected outcome
Open the Energy Corridor (#4)	Site, build, and staff location #4 on the data-backed recommendation.	Capture ~\$843K of demand already driving 9+ miles; expansion into a proven model.
Frontier & exit-readiness	Scope location #5 (Fulshear / Pearland); professionalize for a future sale.	A multi-location, systemized, sellable platform.

What success looks like

Executed in sequence, the plan moves the numbers that matter — and the Aperture Score™ that summarizes them.

Marker	Today	After “Now”	After “Next”	After “Later”
Aperture Score™	56	~64	~72	78+
EBITDA margin	15%	~17%	~19%	20%+
2nd-visit conversion	~50%	~62%	~68%	70%+
Locations	3	3	3	4 → 5

Targets are illustrative and sequence-dependent; they are tracked live in the next phase.

Where this goes next

A plan only creates value if it is executed and measured. The final phase makes the roadmap live — turning each target above into a tracked metric with an owner and a cadence.

Next: Aperture Atlas™ — Manage & Improve Performance

The question it answers: “How do we sustain and improve results?”

Delivers the Scoreboard™ — executive dashboards, KPIs, and automated reporting — plus a re-scored Aperture Score™ so progress against this plan is visible in real time.

APPENDIX

Method

Opportunities were drawn from the Business X-Ray, the Profit Map, and the Customer & Market Map, then scored on value, complexity, risk, and impact. Sequencing favors moves that de-risk and fund those after them. Financial and score targets are modeled and reconcile to the scenario model in Aperture Analytics.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All figures and targets are synthetic, illustrative, and modeled — not guarantees of outcome.

THE ARITHMETIC BEHIND THE RANKING

What each lever is worth

Opportunities are ranked on evidence, not on preference. Each line below answers one question: if this alone moved, what would it be worth? Sized on FY2025, holding everything else constant.

Lever	Move	Operating income	One-off cash
Gross margin	+100 bps	\$64,369	—
Revenue growth	+1%	\$47,191	—
Total operating expense	-1%	\$37,531	—
Provider compensation	-1%	\$16,200	—
Days inventory (DIO)	-1 day	—	\$4,706
Days sales outstanding (DSO)	-1 day	—	\$17,635
Days payable (DPO)	+1 day	—	\$4,706

A point of gross margin is worth \$64,369. A full point of revenue growth is worth \$47,191. That single comparison is why the Focus Plan puts retention and mix ahead of expansion: the cheaper lever is also the larger one.

One lever is listed in order to refuse it

Stretching payables releases \$4,706 of cash a day and is deliberately excluded from the plan. In this segment injectable suppliers set allocation and price on payment behaviour, and the allocation is worth more than the cash. A lever that works arithmetically and fails commercially is still a bad lever.

APERTURE ATLAS™ · PERFORM

Scoreboard™ & KPI System

Making the plan live — measure, manage, and improve

The question this answers: **How do we sustain and improve results?**

Section 08 of 08

EXECUTIVE SUMMARY

The plan, kept honest by numbers

Improvement that isn't measured quietly fades. Aperture Atlas™ turns the Focus Plan into a living Scoreboard: a short list of vital metrics, each with a target, an owner, and a cadence, so leadership can see progress in real time and act before problems reach the P&L. This is what keeps the other four phases from becoming a binder on a shelf.

14

KPIs on the Scoreboard

56 → 72

Aperture Score™ target

Monthly

core review cadence

36 mo

of KPI history in the feed

The Scoreboard is deliberately short. A handful of metrics that move the business — retention, margin, cash, acquisition quality, and the Aperture Score that summarizes them — beat a dashboard of fifty numbers nobody acts on. Every metric below is already computed from Lumina's own data and delivered as a monthly feed, ready to drive the live dashboard you build.

THE SCOREBOARD™

The vital few — with targets and owners

Retention & loyalty — the #1 focus

KPI	Current	Target	Cadence	Owner
2nd-visit conversion (new patients)	~50%	65%	Monthly	Front desk / GM
Returning-visit share	~92%	93%+	Monthly	GM
Membership penetration	34%	45%	Monthly	GM

Financial health

KPI	Current	Target	Cadence	Owner
Revenue	\$6.44M/yr	+12%/yr	Monthly	Owner
EBITDA margin	15%	20%+	Monthly	Owner
Cash / LOC drawn	\$185K / \$410K	\$350K / <\$200K	Monthly	Owner

Growth, acquisition & efficiency

KPI	Current	Target	Cadence	Owner
New patients	~1,350/yr	+ quality	Monthly	Marketing
Blended CAC	\$118	<\$110	Monthly	Marketing
Referral share of new patients	—	30%+	Monthly	Marketing
Paid-social share of spend	55%	<40%	Monthly	Marketing

Operations, spatial & overall

KPI	Current	Target	Cadence	Owner
Average ticket	\$350	+5%	Monthly	GM
Provider utilization	—	80%+	Weekly	GM
Penetration of affluent households	3.7%	5%+	Quarterly	Owner
Aperture Score™	56	72	Quarterly	Owner + Aperture

THE DASHBOARD

Scoreboard™ dashboard — layout & data

The live dashboard is organized into five views, each answering a question an owner actually asks. It is driven by the accompanying data feed and refreshed on the cadence shown.

- **Executive tiles** — revenue, EBITDA margin, cash, and the Aperture Score, each shown against target with a red/amber/green status. The 10-second health check.
- **Retention funnel** — new patient → second visit → member → loyal, with conversion at each step. The single most important view, tracking the #1 constraint.
- **Location comparison** — revenue, margin, and new patients for River Oaks, Katy, and The Woodlands side by side, so the ramp of each is visible.
- **Trends** — monthly revenue and EBITDA margin over 36 months, so seasonality and trajectory are obvious.
- **Spatial view** — the Aperture GIS map embedded: patient heat, penetration by ZIP, and the candidate site — decisions in geographic context.

Refresh cadence

The data feed

Everything on the Scoreboard is delivered as clean, ready-to-connect data:

- **scoreboard_kpi_monthly.csv** — 36 months of every headline KPI: revenue, visits, new patients, average ticket, returning-visit share, membership transactions, marketing spend, CAC, and estimated EBITDA & margin.
- **scoreboard_kpi_by_location_monthly.csv** — revenue, visits, and new patients by location by month, for the comparison view.
- **scoreboard_kpi_definitions.csv** — the KPI catalog: definition, current value, target, cadence, and owner for each metric.

MAKE IT STICK

The operating rhythm

A dashboard changes nothing without a rhythm around it. Aperture Atlas™ pairs the Scoreboard with a simple review cadence:

Cadence	Who	Focus
Weekly (15 min)	GM + front desk	Bookings, provider utilization, rebooking rate — the leading indicators.
Monthly (60 min)	Owner + GM	The full Scoreboard vs. target; what moved, what to adjust.
Quarterly (half day)	Owner + Aperture	Re-score the Aperture Score™, review the Focus Plan, reset targets.

Closing the loop — the re-scored Aperture Score™

Every quarter the Aperture Score is recomputed on the same seven lenses from the Business X-Ray. Watching it climb from 56 toward 72 is the clearest single proof that the plan is working — and where it stalls tells you exactly which lens needs attention next.

The method is a loop, not a line

APPENDIX

Method & data

All KPI values are computed from Lumina's appointment, patient, marketing, and financial data, and reconcile to the financial statements and the Profit Map. Estimated monthly EBITDA applies the operating-expense model from the financial statements (60% fixed, 40% revenue-variable). Targets are drawn from the Focus Plan and the scenario model.

Important disclaimer

Lumina Medical Aesthetics is a fictional company created to demonstrate The Aperture Method. All figures and targets are synthetic, illustrative, and modeled — not guarantees of outcome.

BASELINES

Where the KPI targets come from

A target with no baseline is a wish. Each measure below is carried forward from the Profit Map at its FY2025 value, so the first month of the Scoreboard is measured against a number that was derived rather than chosen.

Measure	Family	Baseline FY2025	Why it is on the board
EBITDA margin	Profitability	15.0%	The headline the whole engagement is trying to move.
Gross margin	Profitability	73.3%	Separates a pricing or mix problem from a cost-base problem.
Return on assets	Returns	23.6%	Catches growth that is being bought with assets rather than earned.
Current ratio	Liquidity	0.66×	Below one. The earliest warning the business gets.
Cash conversion cycle	Efficiency	21d	Tight today. Watched so it stays that way as volume grows.
Days inventory	Efficiency	62d	Dated product and supplier-controlled allocation.
Times interest earned	Coverage	4.84×	The covenant-shaped measure a lender will ask for first.
CFO / net income	Cash flow	1.45×	Whether reported profit keeps turning into cash.
Margin of safety	Break-even	15.4%	How far revenue can fall before operating income turns negative.

Re-derived from the same engine each month, so the board and the report can never disagree.
